

To the talent team,

I am a cross-platform application developer and would like to work with you in any position involving data management and programming, especially databases or mobile applications.

I have experience in creating websites and REST APIs with Laravel (PHP), database management (SQL), basic programming for modifying websites (HTML and CSS), a markup language for managing information such as databases more easily (XML), programming in Java, C++, and Python, and code debugging.

I enjoy working with and analyzing databases, as well as programming in different languages. My mathematical thinking gives me a creative perspective for thinking about and implementing software programs differently than most programmers. I enjoy analyzing, reflecting on, and discussing data.

As for my personality, I am a good communicator, I explain things well, and I enjoy conversation. I am approachable, helpful, and eager to assist others. I want to help resolve any potential conflicts that may arise. I'm always told I'm very polite.

Furthermore, I have a B1 level of English and I enjoy learning new languages. In addition to English, I've also studied French and Russian.

I've attached a CV with my information, education, and experience. Thank you very much for your time.
